Introduction

The *2007 State Physician Workforce Data Book* is an update and expansion of the 2006 *Key Physician Data by State* report, examining the active¹ physician supply in each state, as well as current medical school enrollment and physicians in graduate medical education (GME) programs. An important addition to the report is a set of tables with the actual numbers that are presented visually in the figures.

The *Data Book* is divided into four sections:

Section 1: Active Physicians by State. This section includes data on active physicians in each state, including overall and primary care physician-to-population ratios, age distribution, and active physicians by location and type of medical education. This section also contains figures and data on active physicians within each state who completed their undergraduate medical education (UME) and/or GME in the same state where they are active.

Example: Percentage of Physicians in California who Completed Medical School in California

Section 2: Medical and Osteopathic School Enrollment. This section provides information on medical school enrollment for both allopathic and osteopathic schools, as well as data on the percentage of new medical school students from each state who entered medical school in their state. Five states (Alaska, Delaware, Idaho, Montana, and Wyoming) do not have a medical school. However, Alaska, Idaho, Montana, and Wyoming have an agreement with the University of Washington that reserves slots for residents of those four states at the University of Washington School of Medicine. For purposes of this report, all students at the University of Washington Medical School are counted in Washington and not in other states.

¹The number of active physicians in a state may be slightly higher in this report than data obtained from state licensure boards. The data in this report on active physicians come from the AMA Physician Masterfile, which combines information from a variety of sources: mainly primary data sources and the AMA Census of Physicians. Physicians are surveyed once every three to four years, so there is a lag between the time a physician actually retires or reduces work hours and the time their record is updated to reflect the change in active status. In addition, for records where office state was missing, the state of the preferred mailing address was used. Overall, 14 percent of the active physicians had their office state allocated based on preferred mailing address. This may affect the number of active physicians in states where some physicians work in one state, but live in another state. See the Key Definitions section for additional information.

Section 3: Graduate Medical Education. This section presents tables and figures showing physicians in residency and fellowship positions accredited by the Accreditation Council for Graduate Medical Education (ACGME). This includes both M.D.'s and D.O.'s training in an ACGME-accredited program. In some cases, the data are shown for M.D.'s and D.O.'s separately. The report does *not* include data on the number of physicians in GME training programs that are approved by the American Osteopathic Association. More than half of all D.O.'s are training in ACGME-accredited programs.

Section 4: In-state Retention. This section presents data on retention by states of the physicians they educate and train in medical schools, GME, or both. For each state, we present the number of physicians who completed their UME in the state² and show the proportion who remained in or returned to the state to practice. The same analysis is shown for the number of physicians who completed their GME in each state, and the number of physicians who completed both their UME and GME in the state.

Example: Of Active Physicians Who Completed Medical School in California, the Percentage Who are Active in California

The key difference from section 1 is in the universe being examined. Section 1 looks at all active physicians within the state as the universe of interest (i.e., the denominator). Section 4 looks at physicians who completed their UME and/or GME in a state as the universe (i.e., the denominator).

Each section of the *Data Book* contains figures with bar graphs ranking the states on each measure and tables showing the detailed data. Every bar graph includes the U.S. average and the median for all states. The U.S. average, as well as the data tables, include the District of Columbia. However, the District of Columbia is not included in the state ranking as it is inappropriate to compare physician supply in a city with physician supply in entire states.

The state median is based on the 50 states unless otherwise noted. That is, half the states are above the median and half are below. The District of Columbia is excluded from the state median.

²For purposes of this report, all physicians who completed their UME at the University of Washington Medical School are counted as having completed UME in Washington, regardless of whether they were originally residents of Alaska, Idaho, Montana, or Wyoming (see Section 2 for information about the University of Washington Medical School).

The primary data sources for this report include:

- The American Medical Association (AMA) Physician Masterfile (January 2007);
- Population estimates from the U.S. Census Bureau;
- The AAMC Student Record System;
- The American Association of Colleges of Osteopathic Medicine; and
- The National GME Census, which is jointly conducted by the AAMC and the AMA.

We would like to express our appreciation to the AMA for making the Masterfile data available to the AAMC for purposes of data analysis.

The Center for Workforce Studies welcomes your comments and suggestions for future editions of this report. Please send comments, suggestions, or questions to:

Kerri L. Rivers

Key Definitions

Active physicians: Physicians who are licensed by a state are considered active, provided they are working at least 20 hours per week. Physicians who are retired, semi-retired, temporarily not in practice, not active for other reasons, or who have not completed their graduate medical education are excluded. Active physicians include those working in direct patient care, administration, medical teaching, research, or other non-patient care activities. The total number of active physicians may differ between tables in this report, as a result of missing information in the data file. For example, to determine the percentage of active physicians who are female, the total number of active physicians excludes people whose gender was not reported in the data file.

Medical school: For the purposes of this report, medical schools in the United States and Canada that confer the M.D. degree and are accredited by the Liaison Committee on Medical Education (LCME) are medical schools.

Osteopathic school: Schools of osteopathic medicine that confer the D.O. degree and are accredited by the American Osteopathic Association (AOA) are osteopathic schools.

International Medical Graduate: An individual with an M.D. or related degree who graduated from a medical school outside the United States or Canada is considered an international medical graduate, or IMG. They are occasionally referred to as foreign medical graduates, or FMGs. To be eligible for licensure and practice in the United States, they must complete accredited graduate training in the United States or its equivalent.

Primary care physicians: A physician is considered a primary care physician if his or her primary specialty is adolescent medicine, family medicine, general practice, geriatric medicine, internal medicine, internal medicine/pediatrics, or pediatrics. This information is from the AMA Masterfile and is self reported by the physician.

Commonly Used Acronyms

AACOM	American Association of Colleges of Osteopathic Medicine
AAMC	Association of American Medical Colleges
ACGME	Accreditation Council for Graduate Medical Education
AOA	American Osteopathic Association
D.O.	Doctor of Osteopathy
GME	Graduate medical education
IMG	International medical graduate
M.D.	Doctor of Medicine
UME	Undergraduate medical education

Figure 1. Active Physicians by Degree Type Per 100,000 Population

Sources: July 1, 2006 Population Estimates, U.S. Census Bureau. Physician data are from the AMA Physician Masterfile (January 2007).

Definitions:

Active physicians include physicians who graduated from a U.S. medical school, U.S. osteopathic school, or an international medical school. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure. Physicians whose degree type was unknown were also excluded from this analysis.

See Table 1 for detailed data.

Table 1. Active Physicians by Degree Type

Sources: July 1, 2006 Population Estimates, U.S. Census Bureau. Physician data are from the AMA Physician Masterfile (January 2007).

N.R. = Not Ranked

*These numbers include U.S. M.D.s and IMGs.

Figure 2. Percent of Active Physicians who Graduated from an International Medical School

Source: AMA Physician Masterfile (January 2007)

Definitions:

Active physicians include physicians who graduated from a U.S. medical school, U.S. osteopathic school, or an international medical school. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure.

International medical schools include all medical schools leading to the M.D. or related degree located outside of the United States, U.S. territories, and Canada. The Liaison Committee on Medical Education (LCME) is the accrediting authority for medical education programs leading to the M.D. degree in U.S. and Canadian medical schools.

See Table 2 for detailed data.

Table 2. Active Physicians by Degree Type and International Status of School

	Total Active Physicians	Active U.S. M.D.s		Active D.O.s		Active IMGs		
		Number	Percent	Number	Percent	Number	Percent	Rank

Figure 3. Active Primary Care Physicians by Degree Type Per 100,000 Population

Sources: July 1, 2006 Population Estimates, U.S. Census Bureau. Physician data are from the AMA Physician Masterfile (January 2007).

Definitions:

Primary care physicians include M.D.'s and D.O.'s whose primary specialty is adolescent medicine, family medicine, geriatric medicine, general practice, internal medicine, internal medicine/pediatrics, or pediatrics. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure.

See Table 3 for detailed data.

Table 3. Active Primary Care Physicians by Degree Type

	Total Primary Care Physicians				Primary Care M.D.s		Primary Care D.O.s

N.R. = Not Ranked

Figure 4. Percent of Active Physicians in Each State who Completed Undergraduate Medical Education (UME) in the State

Source: AMA Physician Masterfile (January 2007)

Definitions: Active physicians include physicians who graduated from a U.S. medical school, U.S. osteopathic school, or an international medical school. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure.

State median is based on 45 states because five states (Alaska, Delaware, Idaho, Montana, and Wyoming) do not have a medical or osteopathic school.

See Table 4 for detailed data.

Figure 6. Percent of Active Physicians Age 60 or Older

Source: AMA Physician Masterfile (January 2007)

Definitions:

Active physicians include physicians who graduated from a U.S. medical school, U.S. osteopathic school, or an international medical school. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure. Physicians whose age was unknown were also excluded from this analysis.

See Table 6 for detailed data.

Figure 7. Students Enrolled in Medical or Osteopathic School for the 2007-2008 Academic Year Per 100,000 Population*

Sources: Population estimates were obtained from the U.S. Census Bureau. Students enrolled in medical school were obtained from the AAMC Student database. Students enrolled in osteopathic schools were obtained from the American Association of Colleges of Osteopathic Medicine, accessed online at www.aacom.org on September 26, 2007.

*The enrollment figures are for the 2007-2008 academic year and represent maximum enrollment, including people who are on leave of absence. The population estimates correspond to July 1, 2006, as those were the most recent state level population estimates available at the time of printing.

State median is based on 45 states because five states (Alaska, Delaware, Idaho, Montana, and Wyoming) do not have a medical or osteopathic school.

See Table 7 for detailed data.

Figure 10. Physicians in ACGME-Accredited Residencies and Fellowships Per 100,000 Population

Source: 2006 National GME Census

Population estimates were obtained from the U.S. Census Bureau

Definitions:

This figure shows the number of M.D.'s and D.O.'s in an ACGME-accredited program as of August 1, 2006. This does not include training programs accredited by the AOA. The number of M.D.'s includes M.D.'s from international medical schools. Residents whose status in the ACGME program was "Matched, but not yet in the program" were excluded from this analysis. Similarly, if the state of the residency program or the degree type of the resident was unknown, the resident was excluded from this analysis.

See Table 10 for detailed data.

Table 10. Physicians in ACGME-Accredited Residencies and Fellowships per 100,000 People by Degree Type

Figure 11. Percent of Residents/Fellows in ACGME-Accredited Programs who are International Medical Graduates (IMGs)

Source: 2006 National GME Census

Definitions:

A resident is considered an IMG if they graduated from a medical school leading to the M.D. or related degree located outside of the United States, U.S. territories, and Canada. The distinction between an international medical school and a non-international medical school is based solely on the accrediting authority, rather than the geographic location of the school. The Liaison Committee on Medical Education (LCME) is the accrediting authority for medical education programs leading to the M.D. degree in U.S. and Canadian medical schools.

Residents whose status in the ACGME program was “Matched, but not yet in the program” were excluded from this analysis. Similarly, if the state of the residency program or the degree type of the resident was unknown, the resident was excluded from this analysis.

See Table 11 for detailed data.

Figure 13. Among Active Physicians who Graduated from a Medical or Osteopathic School in the State, the Proportion who are Active in the State

Source: AMA Physician Masterfile (January 2007)

Definitions:

Active physicians who graduated from a medical or osteopathic school in the state include physicians who graduated from a U.S. medical school or U.S. osteopathic school, regardless of where they are active. The proportion who practice in the same state from which they graduated is based on the state of their school and office. In cases where the office location was missing, the state from the preferred mailing address was used. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure.

State median is based on 45 states because five states (Alaska, Delaware, Idaho, Montana, and Wyoming) do not have a medical or osteopathic school.

See Table 13 for detailed data.

--- Indicates that the data are not applicable. Some states do not have a medical or osteopathic school.

Figure 14. Among Active Physicians who Graduated from a Public Medical or Osteopathic School in the State, the Proportion who are Active in the State

Source: AMA Physician Masterfile (January 2007)

Definitions:

Active physicians who graduated from a public medical or osteopathic school in the state include physicians who graduated from a public U.S. medical school or U.S. osteopathic school, regardless of where they are active. The proportion who practice in the same state from which they graduated is based on the state of their school and office. In cases where the office location was missing, the state from the preferred mailing address was used. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure.

State median is based on 42 states because eight states (Alaska, Delaware, Idaho, Maine, Montana, New Hampshire, Rhode Island, and Wyoming) do not have a public medical or osteopathic school.

See Table 14 for detailed data.

--- Indicates that the data are not applicable. Some states do not have a medical or osteopathic school.

Figure 15. Among Active Physicians who Completed Graduate Medical Education (GME) in the State, the Proportion who are Active in the State

Source: AMA Physician Masterfile (January 2007)

Definitions:

Active physicians who completed their graduate medical education (GME) in the state include physicians who graduated from a U.S. medical school, U.S. osteopathic school, or an international medical school and completed their graduate medical education in an ACGME-accredited GME program regardless of where they are active. The proportion who practice in the same state as their GME is based on the state of their school, GME program, and office. In cases where the office location was missing, the state from the preferred mailing address was used. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure.

See Table 15 for detailed data.

Figure 16. Among Active Physicians who Graduated from a Medical or Osteopathic School in the State and Completed Graduate Medical Education (GME) in the State, the Proportion who are Active in the State

Source: AMA Physician Masterfile (January 2007)

Definitions:

Active physicians who graduated from a medical or osteopathic school in the state and completed their graduate medical education (GME) in the state include physicians who graduated from a U.S. medical school or U.S. osteopathic school and completed their graduate medical education in an ACGME-accredited GME program in the same state as their medical or osteopathic school, regardless of where they are active. The proportion who practice in the same state from which they graduated and completed their GME is based on the state of their school, GME program, and office. In cases where the office location was missing, the state from the preferred mailing address was used. M.D.'s and D.O.'s who are residents, fellows, retired, semi-retired, temporarily not in practice, or not active for other reasons are excluded from this figure.

State median is based on 45 states because five states (Alaska, Delaware, Idaho, Montana, and Wyoming) do not have a medical or osteopathic school.

See Table 16 for detailed data.
