March 23, 2022

The Honorable Kay Granger
Chair
Committee on Appropriations
U.S. House of Representatives
Washington, DC 20515

The Honorable Rosa DeLauro
Ranking Member
Committee on Appropriations
U.S. House of Representatives
Washington, DC 20515

The Honorable Robert Aderholt
Chair
Subcommittee on Labor, Health and Human Services
And Education
Committee on Appropriations
U.S. House of Representatives
Washington, DC 20515

Dear Chair Granger, Ranking Member DeLauro and Chair Aderholt:

We, the undersigned professional societies and associations, academic institutions, and companies representing a broad range of scientific, public health, and clinical professionals, thank you for your past support of the Advanced Molecular Detection (AMD) program at the Centers for Disease Control and Prevention (CDC). Given the program's increasing importance to our nation's public health response to infectious disease threats, we respectfully request that you provide $175 million for the CDC AMD program in the Fiscal Year (FY) 2024 Labor, Health and Human Services, Education and Related Agencies bill. This funding level aligns with the level authorized in the Tracking Pathogens Act, which was enacted as part of a year-end legislative package in 2022.

As we move beyond the COVID-19 pandemic, the AMD program continues to form new partnerships and to innovate so that cutting edge genomic and bioinformatic technologies can be deployed on the front lines of public health throughout the country and across the globe. While it has played an indispensable role in the U.S. response to the COVID-19 pandemic, including the expansion and coordination of national sequencing efforts to help the U.S. stay ahead of SARS-CoV-2 variants, the AMD program's work is much broader. It supports every state in the U.S. for a wide range of pathogens and public health applications. By bringing precision medicine to public health, the program gives the nation new tools to detect disease more quickly and more accurately, identify outbreaks sooner, and protect people from emerging and evolving disease threats, whether seasonal such as influenza or RSV, endemic such as Lyme disease, or epidemic in nature. Beyond pathogen surveillance, public health sequencing work informs vaccine development, helps to identify and track antimicrobial resistance and foodborne illness, and informs the development of diagnostics for new, existing, and emerging diseases.

Stakeholder Letter in Support of CDC AMD Program FY 2024

Thanks to Congressional actions over the past two years, the AMD program expanded training for public health and clinical laboratory professionals in genomics and bioinformatics, and it has helped to grow the workforce needed for data analysis, interpretation and decision-making. Through regional workforce development and investment in shared technology services, AMD is helping to ensure that that nation's public health microbiologists, epidemiologists and other health care professionals have the tools needed to apply biotechnology-driven innovations to complex problems. This enables higher quality data and analytics that CDC and its public health partners can use to detect outbreaks sooner, respond more effectively, and ensure that these tools are available in laboratories across the U.S. In addition to dozens of public-private partnerships that have been leveraged to address sequencing of COVID-19 samples, the program also has forged innovative partnerships with public health agencies and academic laboratories in five states through new Pathogen Genomics Centers of Excellence.   These centers will ensure that our public health system can continue to benefit from rapidly evolving, cutting-edge science and technology that is driven by research institutions and well-connected to public health.

Since 2014, the AMD program has employed next generation sequencing (NGS) to bring the concept of precision medicine to bear for "precision public health." A funding level of $175 million for the CDC AMD program will ensure that this important work can continue now and into the future for the betterment of public health. We thank you for your consideration of our request.

Sincerely,
